EDUCATION

CMR Institute of Technology Bangalore,

EXPERIENCE

Intern - Full Stack Developer Feb 2023 Mar 2023

Compsoft Technologies

Developed Flask-based REST APIs handling authentication, session workflows, and booking logic.

Reproduced and diagnosed backend issues by analyzing logs and tracing API exceptions.

Implemented structured error handling and input validation to reduce runtime failures.

Structured backend modules using MVC principles for maintainability and debugging efficiency..

Machine Learning Intern Jan 2025 Mar 2025

iNeuron Intelligence Pvt Ltd

Built retail sales forecasting model (Random Forest) reducing RMSE by 18%.

Designed end-to-end ML pipeline with preprocessing and feature engineering.

Investigated prediction inconsistencies by debugging transformation pipelines.

Deployed Streamlit inference app on AWS EC2 with structured logging

TECHNICAL SKILLS

Programming Languages: Python, Java, C, C++ Core Concepts: Data Structures, Algorithms, Object-Oriented Programming, Problem Solving

Backend Technologies: Flask, Django, REST API s Databases: SQL, MySQL Data & ML: Pandas, NumPy, EDA, Machine Learning AI &

GenAI: OpenAI API, Gemini API, Prompt Engineering, RAG (basic) Cloud & DevOps: AWS , Git, Linux

PROJECTS

1) House Price Prediction Service| Python, Flask, Scikit-learn, AWS Dec 2025 Feb 2026

Built a production-ready Flask REST API serving ML predictions with structured logging and health-check endpoints.

Implemented separation between training and inference pipelines to ensure reliable deployments.

Deployed the application on AWS EC2 with Linux-based configuration and monitoring setup.

Designed input validation and exception handling mechanisms to reduce runtime failures.

2) Mind Metric AI | Python, Flask, Machine Learning, Gemini API, HTML/CSS June 25- July 25

Built backend REST APIs with authentication workflows and database integration.

Integrated Gemini API for AI-driven feedback generation using structured prompt pipelines.

Implemented request logging and error-handling mechanisms for improved traceability.

Deployed application on AWS EC2 and configured Linux environment for production readiness.

3) GenAI Applications (AI Resume Analyzer & JEE MCQ Generator) Python, Flask, OpenAI, Gemini Apr 25 June25

Developed LLM-powered backend services for document processing and generation.

Designed structured REST endpoints and explored retrieval-based workflows.

COURSES

- Certified on topic Data Science with Python from Simplilearn.

PROFESSIONAL SUMMARY

Proactive and detail-oriented Software Engineer with experience in building and deploying production-ready applications on AWS. Skilled in engineering robust backend services, ensuring reliability through structured logging and error handling, and configuring Linux environments for operational readiness and monitoring.
